FLORIDA CENTER FOR RESEARCH IN
SCIENCE, TECHNOLOGY, ENGINEERING, AND MATHEMATICS
FLORIDA STATE UNIVERSITY
2012 CONFERENCE
HILTON ST. PETERSBURG BAYFRONT, DECEMBER 6 – 8, 2012
Outline of Day

Part 1

Content Complexity and Depth-of-Knowledge

Part 2

Common Core State Standards and Assessment Tasks

Part 3

Instructional Strategies
Content Complexity

Differentiates learning expectations and outcomes by considering the amount of prior knowledge, processing of concepts and skills, sophistication, number of parts, and application of content structure required to meet an expectation or to attain an outcome.

✓ Create
The Separate Knowledge Dimension of the Revised Bloom’s Taxonomy

**Factual Knowledge** - The basic elements students must know to be acquainted with a discipline or solve problems in it.

**Conceptual Knowledge** - The interrelationships among the basic elements within a larger structure that enable them to function together.

**Procedural Knowledge** - How to do something, methods of inquiry, and criteria for using skills, algorithms, techniques, and methods.

**Metacognitive Knowledge** - Knowledge of cognition in general as well as awareness and knowledge of one’s own cognition.
Depth of Knowledge (1997)

Level 1  Recall
Recall of a fact, information, or procedure.

Level 2  Skill/Concept
Use information or conceptual knowledge, two or more steps, etc.

Level 3  Strategic Thinking
Requires reasoning, developing plan or a sequence of steps, some complexity, more than one possible answer.

Level 4  Extended Thinking
Requires an investigation, time to think and process multiple conditions of the problem.

DOK 2
A scientist synthesizes a new drug. She wants to test its effectiveness in stopping the growth of cancerous tumors. She decides to conduct a series of experiments on laboratory mice to test her hypothesis.

What should she do?

A. Give half the mice the drug, the other half none, and compare their tumor rates.
B. Give the drug to all mice, but only to half every other day, and record tumor rates.
C. Double the dosage to all mice each day until tumors start to disappear.
D. Give the drug only to those mice that have tumors and record their weights.
Grade 8 Mathematics Task

Look at the drawing. The numbers alongside each column and row are the total of the values of the symbols within each column and row. What should replace the question mark?

DOK 3
Marc Umile poses for a picture in front of a projection of the string of numbers known as pi in Philadelphia, Friday, March, 2, 2006. Umile is among a group of people fascinated with pi, a number that has been computed to more than a trillion decimal places. He has recited pi to 12,887 digits, perhaps the U.S. record. (AP Photo/Matt Rourke)
Content Complexity is Continuous and Generally Decided by Content Analyses.
COMMON CORE STANDARDS
Mathematics
Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.
Structure of CCSS Mathematics

Critical Areas
Domains
Clusters
Standards
Use place value understanding and properties of operations to perform multi-digit arithmetic.

1. Use place value understanding to round whole numbers to the nearest 10 or 100.

2. Fluently add and subtract within 1000 using strategies and algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction.

3. Multiply one-digit whole numbers by multiples of 10 in the range 10-90 (e.g., 9 × 80, 5 × 60) using strategies based on place value and properties of operations.
Grade 5 Number and Operations-Fractions

Use equivalent fractions as a strategy to add and subtract fractions.

1. Add and subtract fractions with unlike denominators (including mixed numbers) denominators. For example, $2/3 + 5/4 = 8/12 + 15/12 = 23/12$. (In general by replacing given fractions with equivalent fractions in such a way as to produce an equivalent sum or difference of fractions with like, $a/b + c/d = (ad + bc)/bd$.)

2. Solve word problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators, e.g., by using visual fraction models or equations to represent the problem. Use benchmark fractions and number sense of fractions to estimate mentally and assess the reasonableness of answers. For example, recognize an incorrect result $2/5 + 1/2 = 3/7$ by observing that $3/7 < 1/2$.

PARCC ASSESSMENT TASK TYPES

**TYPE I: Tasks Assessing Concepts, Skills, and Procedures**
- Conceptual understanding, fluency, and application
- Involve any or all mathematical practice standards
- Machine Scorable

**TYPE II: Tasks Assessing Expressing Mathematical Reasoning**
- Written arguments/justifications, critique of reasoning, or precision in mathematical statements
- Mix of innovative, machine scored and hand scored responses.

**TYPE III: Tasks Assessing Modeling Applications**
- Modeling/application in a real-world context or scenario
- Mix of innovative, machine scored and hand scored responses
43022

A rectangle is 6 feet long and has perimeter of 20 feet. What is the width of the rectangle? Explain how you solved this problem.
43023
A rectangle is 6 feet long and has perimeter of 20 1/3 feet. What is the width of the rectangle? Explain how you solved this problem.
Rectangle 1
Sample Top-Score Response:
20 – 6 – 6 = 8 feet
Half of 8 feet is 4 feet, so the width is 4 feet long.

Full credit (2 points):
The response demonstrates a full and complete understanding of problem solving.

The response contains the following evidence:
• The student determines that 4 feet is the width of the rectangle with a correct process clearly demonstrated.
Partial credit (1 point):
The response demonstrates a partial understanding of problem solving. The response contains the following evidence:
• The student determines 4 feet is the width, but does not show sufficient work to support this conclusion.
OR
• The student begins a correct process for determining the missing width, but ends up with an incorrect solution due to an incomplete process, computational mistake, or other mechanical error in the process.
TARGETED STANDARD FOR
ITEMS 43022 AND 43023

CCSS 4.MD.3
Apply the area and perimeter formulas for rectangles in real world and mathematical problems. For example, find the width of a rectangular room given the area of the flooring and the length, by viewing the area formula as a multiplication equation with an unknown factor.

FL DOK 2  SB DOK 1 and 2
A portion of the graph of a quadratic function $f(x)$ is shown in the $xy$-plane. Selected values of a linear function $g(x)$ are shown in the table.

</tr>
</tbody>
</table>
Drag tiles to complete the sentences and the equation below based on the results of Tom’s experiment.

<table>
<thead>
<tr>
<th>golf balls</th>
<th>change</th>
<th>glass jars</th>
<th>water height</th>
<th>1.16</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.2</td>
<td>1.3</td>
<td>9.0</td>
<td>12.0</td>
<td>13.8</td>
</tr>
</tbody>
</table>

The height of the water changes at an average rate about __ centimeters per golf ball. If these data are graphed with the number of golf balls as the independent variable, the y-intercept for the graph would be about __ centimeters. This means that for zero __, the __ is 9 centimeters. Tom’s table and graph can be represented by the trend line with the equation

\[ y = \underline{\text{__} \times \underline{\text{__}}} \]
TARGETED STANDARD FOR PARCC
SAMPLE MATHEMATICS ITEM

Linear, Quadratic, and Exponential Models☆ F-LE
Construct and compare linear, quadratic, and exponential models and solve problems.

2. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).☆

5. Interpret the parameters in a linear or exponential function in terms of a context.☆

FL DOK 2  SB DOK 1, 2, and 3
Strategies For Using DOK To Improve Learning
2.0A.3. Determine whether a group of objects (up to 20) has an odd or even number of members, e.g., by pairing objects or counting them by 2s; write an equation to express an even number as a sum of two equal addends. (Grade 2 Operations and Algebraic Thinking)

DOK 1:

Define:
- odd
- even
- number
- equal addend
- sum
- group
- equation

Count to 100
Count by 2
Deconstruction (continued)

DOK 1 (continued):
- Understand the number line
- Place numbers on a number line
- Use skip counting
- Pair objects
- Compare numbers
- Identify a number as odd or even
- Identify an equation

DOK 2:
- Write an equation
### Match Instructional Activity To Complexity of Outcome

<table>
<thead>
<tr>
<th>Complexity of Outcome</th>

</tr>
<tr>
<td>DOK 3</td>
<td>Justify, Practice, Search</td>
</tr>
<tr>
<td>DOK 4</td>
<td>Search, Build, Repeat, Represent, Reveal thinking</td>
</tr>
</tbody>
</table>
Design Appropriate Assessments

- **Question**
  - DOK 1: What, Where, Find, Compute
  - DOK 2: Why or Why Not, Compare
  - DOK 3: Imply, Infer, Project, Generalize

- **Context**
  - DOK 1: None
  - DOK 2: Familiar and Relevant
  - DOK 3: Unfamiliar, Multiple, Entire Text

- **Application**
  - DOK 1-2: Little or none
  - DOK 3-4: Fit, verify, and justify
Issues with DOK
Issues in Assigning Depth-of-Knowledge Levels

- Complexity vs. difficulty
- Distribution by DOK Level
- Item type (MC, CR, OE, EBSR)
- Central performance in objective
- Consensus process in training
- Application to instruction
- Reliability
